Castellon.CH | Suite

FOR GXP LABS, QUALITY, LIFE SCIENCE & LEGAL TEAMS · IN SWITZERLAND AND THE EU

Excel and AI in regulated settings. Under your control.

Four Castellon.CH tools for teams that work with Excel sheets and AI assistants: review workbooks before an audit, work with agents on your own PC, pseudonymise personal data before it reaches the cloud, and record every AI call.

- GxP Sonar
- AgentDesk
- Anonimator
- mcp-glp-audit-proxy

On your PC or your own infrastructure: none of them is a hosted service.
You keep using your own AI tools and accounts.

The challenge

Labs and quality teams rely on hundreds of Excel sheets full of calculations, macros and links, and are starting to use AI assistants with real documents. In regulated settings every calculation and every action needs to be traceable, and personal data shouldn't reach an external provider as it is.

Four tools

GxP Sonar
GxP Excel sheet review

Portable Windows app that reviews folders of Excel workbooks and flags data-integrity risks: formulas, VBA macros, protection, external links and hand-typed values. Read-only, no admin, no installation.

For: GxP labs, quality and life science — DEMO ON REQUEST

AgentDesk
Workplace agents on your Windows PC

Each bot keeps its own name, memory and folders, and the conversation stays on that PC. It uses an engine already installed there: Codex, Claude Code, GitHub Copilot CLI or Gemini CLI. Not a hosted service.

For: individuals or small teams on Windows 10 or 11 — BETA, IN TEST

Anonimator
Pseudonymisation before cloud AI

Local gateway that replaces names, emails, IBANs, national IDs and other personal data with placeholders before they reach ChatGPT, Claude or Copilot, and restores the real data in the answer.

For: labs, universities, law firms and in-house legal teams — PRE-RELEASE · DEMO

mcp-glp-audit-proxy
Audit trail for AI calls

Self-hosted proxy that records every AI call in a hash-chained, tamper-evident audit trail and lets through only the calls you allow.

For: labs, life science and universities — COMMUNITY FREE

How they fit together

1. **Before the audit** — GxP Sonar
   Review whole folders of Excel files and document what was found.
2. **Day to day** — AgentDesk
   Agents with their own memory on each person's PC.
3. **Before the cloud** — Anonimator
   Identities leave as placeholders; the key stays on your premises.
4. **Always traceable** — mcp-glp-audit-proxy
   Every call is recorded and can be verified.

Each tool covers a different point and works on its own: **use one or several, as you need.**

FOR GXP LABS, QUALITY, LIFE SCIENCE & LEGAL TEAMS · IN SWITZERLAND AND THE EU

Four products, one principle: your control.

GxP Sonar

DEMO ON REQUEST

- Read-only: never modifies or saves your files, never runs macros
- Every finding with its risk and location: sheet and cell, or VBA module and line
- Optional AI (Pro) with your own engine; you decide what the AI sees
- Built-in GxP prompts that cite their clause for guidance: EU GMP Annex 11, 21 CFR Part 11, GAMP 5, PIC/S PI 041-1, MHRA 2018
- PDF reports to review; a person always makes the decision

When to use it: before an audit, a validation or a migration.

AgentDesk

BETA, IN TEST

- Each bot with its own name, memory and folders
- The conversation stays on that PC; not a hosted service
- Works with Codex, Claude Code, GitHub Copilot CLI or Gemini CLI already installed on the PC
- Portable: unzip and run AgentDesk.exe (about 64 MB)
- 30 days free; after that, a licence for that PC on request

When to use it: when you want several local agents on Windows, with the work kept on your own computer.

Anonimator

PRE-RELEASE · DEMO

- Detects names, emails, phones, IBAN, AHV/AVS, DNI/NIE, dates and licence plates
- A local gateway checks every outgoing prompt and blocks it if any identifying data remains
- Mapping only in memory, on your premises, destroyed after each query
- Names, IDs, contacts and full dates pseudonymised by default
- Word, Excel, PowerPoint, PDF and text; ES, DE, FR, IT, EN; standard CPUs, no GPU

When to use it: when your lab or legal team wants to use cloud AI with documents that contain personal data.

mcp-glp-audit-proxy

COMMUNITY FREE

- Records every AI call: what, when and which tool
- Hash-chained, tamper-evident trail with a verify tool
- Read-only by default plus an allowlist; every block is logged
- Open-source Community edition (MIT); self-hosted, no phone-home
- Designed to support GLP, 21 CFR Part 11 and EU GMP Annex 11 workflows

When to use it: when AI assistants query ELN, LIMS or databases and every action needs to be traceable.

Contact us / Request a demo

Request a demo of GxP Sonar, Anonimator or the proxy's Pro edition, or an AgentDesk licence, for your lab, company or university.

These tools help you prepare, protect and document; they do not replace the validation of your systems or the judgement of the responsible person, and do not by themselves guarantee regulatory compliance. AI can be wrong. Anonimator performs pseudonymisation, not anonymisation: the data remains personal data (CJEU, C-413/23 P). AgentDesk is not an OpenAI, Anthropic, GitHub or Google product. All trademarks mentioned belong to their respective owners.
